

13LT-2000+90CM-405-7-Y07-M60-C-6

Semi-telecentric Micro Line Generator

FEATURES

Semi-telecentric laser line with constant line length 15mm and approx. uniform intensity distribution.

Line length: 15 mm
Line width: 74 µm
Wavelength: 405 nm
Working distance: 1993 mm

 Micro Line Generator for small laser line widths and high power density in the focal plane

DESCRIPTION

The laser diode beam source type 13LT-2000+90CM-405-7-Y07-M60-C-6 produces a semi-telecentric laser line with 15 mm line length. The intensity profile is approx. uniform in line direction. More precisely, it is Gaussian clipped by an aperture with an edge intensity of 70 %. The line width is constant along the laser line. Across the laser line the intensity distribution is Gaussian.

The laser has integrated electronics $\underline{type\ C}$ for control of the laser output power. The output power can be controlled using the $\underline{modulation\ input\ ports\ (TTL\ and\ analog)}$ or manually using the potentiometer.

For this laser type the working distance is fixed. A fine-adjustment of the distance between laser and target is recommended for fine-focusing in order to achieve minimal line width.
