Micro Focus Optics

FEATURES

Micro focus optics used for focussing the collimated radiation exiting a fiber collimator.

- Attachment optics for fiber collimators type
 60FC-L or 60FC-T with outer diameter Ø 25 mm
- Focal length f' = 500 mm
- AR Coating 600 1060 nm

DESCRIPTION

The Micro Focus Optics type 13M-S500-05-S is used to generate a small laser spot from the collimated radiation of a fiber collimator.

The <u>size of the spot</u> and its <u>Rayleigh range</u> is determined by the fiber properties and by the focal lengths of the fiber collimator and of the micro focus optics. For single-mode fibers the Gaussian intensity distribution and beam shape are maintained.

It is designed for the fiber collimators series $\underline{60FC-L}$ or $\underline{60FC-T}$ with an outer diameter \emptyset 25 mm.

Adjustment:

In order to change the working distance of the Micro Focus Optics the lens position of the adjacent collimator has to be readjusted.

Housing material:

As standard, the housing of the Micro Focus Optics is made of nickel silver. For amagnetic fiber collimators Schäfter+Kirchhoff offers Micro Focus Optics with
