

### 5LP40-S325+55CM-445-71-G02-A7.5-PS-7

Micro Line Generator with a large fan angle

#### **FEATURES**

Laser line with a large fan angle and Gaussian intensity distribution.

Line length: 228 mm
Line width: 119 μm
Wavelength: 445 nm
Working distance: 317 mm

- Micro Line Generator for small laser line widths and high power density in the focal plane
- With RS232 interface

### **DESCRIPTION**

The laser diode beam source type 5LP40-S325+55CM-445-71-G02-A7.5-PS-7 has a fan angle of 40°.

The intensity profile is Gaussian in line direction clipped by an aperture with an edge intensity of 2 %. The line width is constant along the laser line. Across the laser line the intensity distribution is Gaussian.

The laser has integrated electronics <u>type PS</u> with micro-controller for control of the laser output power and serial interface (RS232). The output power can be controlled using the <u>modulation input ports (TTL and analog)</u> or manually using the potentiometer.

The working distance can be adjusted by adjusting the focus setting. Please note that beam parameters like line length and line width increase proportionally to the working distance. A fine-adjustment of the distance between laser and target is recommended for fine-focusing.

## **TECHNICAL DATA**
