

Half-wave plate, low-order 5WP-2-488L-L

allows polarization rotation of linearly polarized radiation of 488 nm

FEATURES

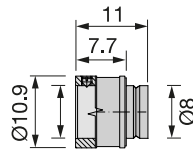

The retardation optics of type 5WP-2-488L-L is a half-wave plate that allows the polarization rotation of linearly polarized radiation of 488 nm.

- Attachment optics with system mount ~ 8 mm for fiber collimators type [60FC](#) with outer diameter ~ 12 mm
- Low-order half-wave retardation optics with an 1.5° inclined mounting in order to avoid direct back-reflections
- Center wavelength: 488 nm
- Free rotation for best adjustment with positional locking using radially arranged screws.
- Long-form housing with system mount ~ 8 mm for adding additional attachment optics
- Adjustable using Schäfter+Kirchhoff Polarization Analyzer series [SK010PA](#).
- For collimating focal lengths $f > 25$ mm Schäfter+Kirchhoff offers fiber collimators of type [60FC-Q](#) with integrated retardation optics.

TECHNICAL DATA

Half-wave plate, low-order 5WP-2-488L-L

Dimensions (for a complete dimensional drawing please refer to the downloads section)
