

## LNC-13MMC-M125-8+96CR-635-1-B08-M60-H-6

Low Noise Laser Macro Focus Generator with rotationally symmetric beam profile

#### **FEATURES**

Laser spot with rotationally symmetric, Gaussian beam profile and extended depth of focus.

Spot diameter: 0.017 x 0.017 mm

Wavelength: 635 nmWorking distance: 111 mmDepth of focus: 0.691 mm

Low noise laser module (0.1 % RMS, @<1 MHz)</li>

- Macro Focus Generator for extended depth of focus
- Low noise, low coherence laser module (typ. < 0.15 % of P<sub>0</sub> (RMS, Bandwidth < 1 MHz))</li>

#### **DESCRIPTION**

The laser diode beam source type LNC-13MMC-M125-8+96CR-635-1-B08-M60-H-6 produces a rotationally symmetric laser spot with extended depth of focus. The beam profile is rotationally symmetric and approx. Gaussian.

The laser type LNC-13MMC-M125-8+96CR-635-1-B08-M60-H-6 produces a circular laser spot with extended depth of focus. The beam profile is approx. Gaussian.

The laser has integrated electronics  $\underline{type\ H}$  for control of the laser output power. It is a low noise laser source (0.1 % RMS,@<1 MHz) with reduced coherence length and operates mode-hopping free. Due to the reduced coherence length the speckle contrast might be lowered. Please note that this effect is smaller for smaller lines and spots. The output power can be controlled using the  $\underline{modulation\ input\ ports\ (TTL\ and\ analog)}$  or manually using the potentiometer.

The working distance can be adjusted by adjusting the focus setting. Please note that the spot diameter increases proportionally to the working distance. A fine-adjustment of the distance between laser and target is recommended for fine-focusing.
